WHAT WAVE AI DOES

Operational Intelligence, Built for Renewables

Smart Summary

Every team starts the day with the highest-priority issues already surfaced — urgent queues, revenue exposure, repeat faults, and clear next steps. No manual triage required.

Intelligent Prioritization

Wave AI ranks every issue by business impact, not alarm severity. Engineers see which assets recover the most megawatt-hours. Asset managers see where revenue risk is concentrated.

Natural Language Queries

Ask questions directly against your operational data and get answers instantly — without switching tools, writing queries, or chasing context across platforms.

Portfolio-Level Visibility

Owners, O&M teams, and asset managers work from the same operational picture. Faster alignment, fewer surprises, and clearer accountability across the fleet.

BUILT FOR EVERY ROLE

The Right View for Every Team

Engineers

Shift the daily question from 'What alarms came in?' to 'What actions recover the most megawatt-hours today?'

Asset Managers

See which sites are underperforming, which issues drive the biggest revenue impact, and where problems repeat across the fleet.

Executives

Understand where portfolio risk, exposure, and follow-up priorities are concentrated — without reviewing sites one by one.

O&M Teams

Quickly identify faults and performance issues, and coordinate with owners from a shared operational context.
